Status Report

Date of Report: April 10, 2011
Period Covered: March 1, 2011 - March 31, 2011

Work Performed during the Reporting Period

- DNAPL from BR-I continues to be removed on an every-other-week basis. Approximately 793 gallons of liquids have been collected between December 2009 and the end of February 2011, including at least 112 gallons of DNAPL. The estimated DNAPL volume of 112 gallons is accurate as of January 6th. Between January 6th and the end of February, ice in the storage tank prevented the identification of the water/DNAPL interface during site inspections.

On March 10th, the contents of the liquids storage tank were pumped into drums and the drums were disposed of at a permitted waste treatment and disposal facility. However, no liquid level measurements were recorded before or after the event and, accordingly, the volume of liquids removed from BR-I between the end of February and the end of March were not measured and have not yet been estimated.
- The draft RI/FS was submitted to EPA on November 16th, 2009, and is currently under review by the agencies.

Attachments

- There are no Technical Memoranda or data submitted with this report.

Work Scheduled for Next Reporting Period

- Continue pumping DNAPL from BR-I on a bi-weekly basis.
